

Raspberry Pi Instruction

Flashing Code onto Raspberry Pi

SSH into raspberry pi to use it heedlessly (without monitor). The preferential way of doing this is if you have VSCode installed, which all the raspberry pi's do. Then, in your VS code do the following:

1. Install SSH extension to allow remote explorer.
2. Add new host by going to the search bar in the top middle of the screen. Then, press shift + ctrl +P. Search ssh.
3. Select "Remote SSH: Add new SSH host"
4. Write one of the below addresses depending on which is your pi. Then enter password.
5. You should be in the raspberry pi now and be able to remote program on it heedlessly.

IEEE Raspberry Pi Information:

Ssh dim@170.20.10.9
